SUMMARY

Computer Science graduate and gameplay programmer with shipped Unity and Unreal Engine projects across puzzle, platformer, and narrative genres. Experienced building core gameplay systems — including AI, dialogue, physics, and object pooling — with a focus on clean, modular C# architecture and performance. Passionate about crafting gameplay experiences that feel polished and intentional.

PROJECTS

Inverse | Unity | C#48-Hour Game Jam 2025

Gameplay Programmer — Team Lead (6-person team)

- Led development of a puzzle-platformer in a 48-hour game jam, coordinating a 6-person team to deliver a polished build under deadline.
- Designed and implemented a custom light refraction system in Unity (C#), powering core puzzle mechanics through dynamic beam interactions.
- Engineered a character-swapping system integrated with environmental puzzles, requiring players to strategically alternate between mirrored states to progress.

Vampiric Ascension | Unity | C#

Gameplay Programmer

- Designed a multi-phase boss AI with HP-based state transitions and modular movesets, enabling dynamic and escalating combat encounters.
- Engineered a high-performance projectile system using object pooling, improving performance under heavy load by 60%.
- Implemented core gameplay systems including scene transitions and centralized game state management.

Crystal's Debut | Unity | C# | Yarn Spinner

Gameplay Programmer

- Transitioned from a custom dialogue prototype to Yarn Spinner 3 for scalable, maintainable narrative implementation.
- Implemented event-driven dialogue logic with custom C# bindings for gameplay and UI triggers.
- Developed a puzzle system integrated into narrative progression with validation and win-state logic.

ONCE | Unreal Engine | Blueprints

Gameplay Programmer

- Architected a time-based day-reset loop that restores world state while preserving player progression data across cycles.
- Built modular interaction and dialogue systems with conditional progression logic and a room-transition system enabling seamless movement between gameplay spaces.

WORK EXPERIENCE

Data Entry Specialist | ResultsCX | Atlanta, GA Aug 2025 – Dec 2025

- Maintained accurate records across high-volume data entry workflows, demonstrating attention to detail and reliability in a structured team environment.

Package Sorter | UPS | Atlanta, GA May 2024 – Jul 2024

- Maintained accuracy and throughput in a fast-paced, high-volume environment, consistently meeting performance targets under time pressure.

EDUCATION

Georgia State University — B.S. Computer Science — GPA: 3.80 — Dean's List May 2024

SKILLS

Engines: Unity (primary), Unreal Engine

Languages: C# (primary), Unreal Blueprints, JavaScript, Java, SQL, HTML

Gameplay Systems: AI state machines, object pooling, dialogue systems, physics, scene management, game state

Tools & Other: Git, GitHub Actions, Unity Editor, Visual Studio, itch.io, React, Node.js, AWS, Firebase
